The Bouligand (also known as helicoidal or twisted plywood) pattern which widely exists in the exoskeleton of arthropods and the scales of fish [6,29,49,, , , ], features a twisted stair-like stacked lamellar structure, as shown in Fig. 2(b). The fibers in each lamella have a diameter of 50–300 nm and are composed of aligned chitin fibrils with a diameter of 3 nm wrapped in proteins [].

During the biomineralization of hard tissue, the microstructures of natural materials are precisely controlled and duplicated (). There is growing evidence that biomineralization at the growth frontier occurs in an integrated crystalline-amorphous interface: The crystalline mineral phase is coated by its amorphous phase (precursor) to ensure continuous epitaxial construction (e.g., the crystal ...

Design Blades. Smaller scale turbine blades are usually 1.5 to 3.5 metres (4 ft 11 in–11 ft 6 in) in diameter and produce 0.5-10 kW of electricity at their optimal wind speed. The majority of small wind turbines are traditional horizontal-axis wind turbines. In some situations, vertical axis wind turbines have operational advantages in maintenance and placement due to their simplicity ...
