### Ancestors In Search Of Human

Human evolution. Human evolution is the lengthy process of change by which people originated from apelike ancestors. Scientific evidence shows that the physical and behavioral traits shared by all people originated from apelike ancestors and evolved over a period of approximately six million years.

### Introduction to Human Evolution | The Smithsonian ...

The formation of goose bumps in humans under stress is a vestigial reflex; a possible function in the distant evolutionary ancestors of humanity was to raise the body's hair, making the ancestor appear larger and scaring off predators. Raising the hair is also used to trap an extra layer of air, keeping an animal warm. Due to the diminished amount of hair in humans, the reflex formation of ...

The chimpanzee hand. The chimpanzee hand will be taken as a model for the hand of the hominid ancestor. The most ancient hominid fossils closely resemble chimpanzees, who are genetically our nearest relatives (Sibley, 1992; Ruvolo, 1997). Pan and human lineages diverged 5-7 million years ago (Mya), about the time the first hominid specimens appear in the fossil record (Klein, 1999).
