In this lesson, we will look at how to use the Binomial Theorem to expand binomial expressions. Binomials are expressions that contain two terms such as $(x + y)$ and $(2 - x)$. The Binomial Theorem states that. Note that: 1) The powers of a decreases from n to 0. 2) The powers of b increases from 0 to n . 3) The powers of a and b always add up to n .

Binomial Theorem (solutions, examples, videos)

Binomial Theorem : b. If $n - r$ is less than r , then take $(n - r)$ factors in the numerator from n to downward and take $(n - r)$ factors in the denominator ending to 1. For example, to expand 5^{-7} . again, here $7 - 5 = 2$ is less than 5, so take two factors in numerator and two in the denominator as, $5^{-7} \cdot 7 \cdot 2 \cdot 1 = 21$. Some Important Results (i). $(-)$ =
