### Chemometrics | Analytical Chemistry

Process analytical chemistry as it was originally termed, or the newer term process analytical technology continues to draw heavily on chemometric methods and MSPC. Multiway methods are heavily used in chemometric applications. These are higher-order extensions of more widely used methods. For example, while the analysis of a table (matrix, or second-order array) of data is routine in several fields, multiway methods are applied to data sets that involve 3rd, 4th, or higher-orders.

### Applications of Process Analytical Technology to ...

The primary aims of chemometrics are to separate useful information from noise and to find the crucial patterns in the experimental data. The central idea is to reduce the dimensionality of the data consisting of a large number of measured variables (in this case, NMR shifts) while retaining as much useful information as possible.
