What is pancreatic insufficiency? Pancreatic Insufficiency (EPI) is a condition which occurs when the pancreas does not make enough of a specific enzyme the body uses to digest food in the small intestine. The pancreas is a glandular organ. That means the pancreas secretes juices that maintain the proper function of the body.

1. Introduction. Autophagy is a physiological cellular process for the degradation and elimination of misfolded proteins and damaged organelles that functions in adaptation to starvation, development, cell death, and tumor suppression [1,2]. One of the important mechanisms of autophagy is an intracellular degradation pathway mediated by double membrane vesicles called autophagosomes.

The Roles of Autophagy in Cancer
