Each book has a full description and a direct link to Amazon for the download.

How Do Animals Adapt The

The climate around us keeps on changing. In order to survive the changing climate, animals are equipt with special features which help them in their adaptation. This is especially important in case of the animals

living in extreme climatic conditions who have to protect themselves against the extreme heat or cold. These features that help them in adaptation are a result of the process of ...

Adaptation in Animals: Polar Bear, Penguins, Tropical

. . .

An adaptation is a way an animal's body helps it surgive, or live, in its

environment. Camels have learned to adapt (or change) so that they can survive. Animals depend on their physical features to help them obtain food, keep safe, build homes, withstand weather, and attract mates.

How Animals have adapted to their Environment In the harsh cold climate of Alaska, the Page 6/23

animals have learnt to adapt to the weather by storing food in their body and protecting themselves from the cold with thick furs. Human inhabitants in Alaska have also learnt to cope with the environment by building shelters that insulate and hold the heat, and yet do not allow the structure to melt.
