How To Create Odata Services

Select the Microsoft OData Connected Service that you installed and use the Wizard to generate proxy classes for the OData endpoint that you want to use. Once all this is done, open the 'Books.cshtml' page and include the code below in the OnInitializedAsync method.

Blazor WebAssembly with OData Client - OData | Microsoft Docs

name (required) determines the table to create or use in Azure Table Storage. generatedKeyName (optional) is the name of a column that uniquely identifies a document. Values for this column will be generated during enrichment. If you omit it, the search service will create a default key column based on the table name.
