Dimensional stability is often indirectly proportional to corrosion rates in the metal. Metals with good dimensional stability are tough and rigid with minimal response to wear and tear over prolonged periods of use. This is characterized by maintenance of its original pleating and shape, with minimal shrinkage or plasticity.

The fabric with good dimensional stability is worn and washed for many times, the original pleating and shape are unchanged, and the dimensions don't shrink or elongated, which don't affect the user experience. The fabric with poor dimensional stability is usually shown as shrinkage, such as shrinkage in sewing, ironing, washing and so on.
