There are zoom lenses with a range of f-numbers given as f/3.5-5.6. These are known as “variable aperture zoom lenses”, where the aperture changes with the focal length. In the case of the EF24-105mm f/3.5-5.6 IS STM, the aperture (f-number) at the wide-angle end (24mm) is f/3.5, and the aperture at the telephoto end (105mm) is f/5.6.

How to enable manual aperture adjustment on Canon FD Lenses

When using an adapted manual-focus lens on a Canon dSLR, you have to use either the M or Av mode on the camera. No other modes work properly, because the camera cannot tell the lens to change the aperture setting. Aperture must be adjusted via the lens's aperture ring, and ISO is adjusted on the camera body, as you normally would.

How do I adjust aperture and ISO when using a manual lens ...

Canon U.S.A., Inc. | Lenses User Manual

A zoom lens with only one aperture number in the description is a fixed aperture lens, for example, the Tamron 28-75mm 2.8. However, there are some zoom lenses that are variable aperture lenses. These lenses change aperture as you zoom in and out. Meaning depending on your focal length the aperture can only go so wide.

What Every Photographer Should Know About Manual Mode

Aperture priority mode works just fine with a manual lens (or no lens at all) on my Canon 550D so I assume it will work on a 60D What happens is that the camera display shows an aperture of "F00" and the camera will set the shutter speed based on the amount of light it can see (making the result picture exactly the same as if you set the aperture in the camera).

Does aperture priority mode work with a manual aperture lens?

Photographers Agency: Aspects of Manual Lenses for Canon Cameras. Manual lenses can come in handy when a photographer is shooting a close-up with a telephoto lens, trying to capture the image of a subject in motion, or focusing on a subject in low light. These lenses for Canon EOS and

Aperture ring. In camera. Aperture ring. All older lenses (manual focus lenses without a computer chip) have an aperture ring. Turn it to set the aperture. Canon has done away with aperture rings altogether. Nikon, on the other hand, still offers elements of old (aperture ring) and new-school (computer chip) technology in its D-series lenses.

How to Set the Aperture on Your Digital SLR - dummies

Most lenses produced for Canon EF mounts (excluding Samyang/Rokinon lenses along with a few non-mainstream models) have an auto iris aperture control. Even Zeiss manual focus lenses in Canon (ZE) mounts have automatic irises, and Samyang/Rokinon is retooling many of their lenses with AE versions with auto aperture control.

Why Every Photographer Should Use a Manual Focus Lens

The range of possible f-stops depends on your lens and, with most zoom lenses, on the zoom position (focal length) of the lens. For the 18-135mm kit lens, for example, you can select apertures from f/3.5 to f/22 when zoomed to the shortest focal length (18mm). At the maximum focal length (135mm), the aperture range is from f/5.6 to f/36.
