Stress Ecology Environmental Stress As
Environmental stressors, such as heat stress, are particularly detrimental to animal agriculture [2,3,4]. The issue of environmental stress has quickly become a great point of interest in animal agriculture, particularly due to public awareness and concerns. The importance of animal responses to environmental challenges applies to all species.

Impact of Heat Stress on Poultry Production
Abiotic stresses and soil nutrient limitations are major environmental conditions that reduce plant growth, productivity and quality. Plants have evolved mechanisms to perceive these environmental challenges, transmit the stress signals within cells as well as between cells and tissues, and make appropriate adjustments in their growth and development in order to survive and reproduce.
