Labor market  
segmentation is the  
division of the labor  
market according to a  
principle such as  
occupation, geography  
and industry.. One type  
of segmentation is to  
define groups "with  
little or no crossover  
capability", such that  
members of one  
segment cannot easily

join another segment.  
This can result in  
different segments, for  
example men and  
women, receiving  
different wages for the  
same work.
